Many people believe that the use of new technology improves lives of employees. Others think that it is disadvantages for them.

Discuss both views and give your own opinion.

People, not least employees, have recently witnessed the various irreversible impacts of modern technology in their living conditions. Although having some undeniable benefits, modernization has some dire consequences for the workforce. I personally presume that its merits and demerits should be given equal consideration.

By the advent of new technology in the workplace, staff experience decent transformations in their work circumstances. To begin with, not only can it facilitate the implement of jobs, but also it can increase the efficiency and accuracy of the production's process. In other words, human errors can be reduced provided that these new industrial and scientific discoveries are exerted. Moreover, through drawing a comparison between the situation of today's employees and that of their previous counterparts, space and time boundaries can be eliminated readily. Employees can work from anywhere and anytime.

On the other hand, new technology can pose a threat to employees. Firstly, mass automation and computerization as the figure of these alterations can lead to downsizing the workforce. Furthermore, it is well-documented that the more easily the situations, the less creative the workers, so despite reducing human errors, it may result in a downward trend in efficiency of the workers. Prestigious statistics suggest that confrontations between authorities and employees decrease by virtue of modern technology. However, these have actually occurred due to a plunge in their face time. The bosses, for example, prefer to lay off the large number of staff either just by sending emails or at most via a videphone which may annihilate the employees' self-esteem and has irredeemable impacts on their spirits.

In conclusion, some advocate the effects of technology on employees' circumstances. Nevertheless, the opponents of this notion emphasize the drawbacks of this phenomenon. I believe that these two views are worth considering.
