

What changes do you think this new century will bring?

The 21st century will bring enormous changes in technology, health care and transportation. Developing human life's lead to increasing quality of life and convenience.

Technological changes and use of the internet and computers would become more widespread, as they transformed our lives and living without them is unimaginable. Digital life will change and there will be tremendous evolution in software and hardware. Data transmission speed and sharing information will increase. The internet will be faster and pervasive.

Medical science progress would eradicate many of deadly disease. Because of medical research, new effective drugs and surgical techniques will improve. Prevention of disease is one of the most important aim of the research. Emerging treatment equipment for example x-ray, radiotherapy and MRI have been helping diagnosis and cure recently. More accurate devices are entering the medical community. So rehabilitation and curing lethal illnesses will be less complicated. Significantly death of human will decrease.

In transportation technology, we are likely to see more change. We are look forward to seeing driverless transportation. cars will work without fossil fuels. Solar energy will be the most important consumption sources. Faster trains and buses are expected so distances are shorter.

In conclusion, this era would bring marvelous discoveries to our life and people with the help of the technologies can do many things that seem impossible now. Duo to rapid modifications nobody knows what changes exactly will happen in future. We are hopeful these changes bring us more convenient and qualified life.
