

The government should allocate more funding to teach science rather than other subjects in order for a country to develop and progress. To what extent do you agree?

This essay agrees that the scientific teaching has a critical effect on governments' development and the teaching sciences financially should be more considered rather the other subjects.

As a matter of fact, without proper education, professions can't growth and consequently the opportunities for developing countries will lose. The countries which focus on educational system and spend more money and effort on the knowledge of teaching in various fields would get better result and grow faster. For Instance, Japan as a country with many advances in technology had faced various difficulties such as war and destructions. But its government always has emphasized on investment in teaching science researches to improve industries.

On the other hand, there is an opinion that a scientific educational system would guarantee preserving the human and financial resources. This illustrates that the inappropriate educational system not only wast the resources but also postpone the countries growing. In this regards, educational systems in some developing countries, has dramatically changed and they have found that spending money on improving educational system is inevitable.

In conclusion, for having more advances in fields like technology, and industries, every government should found on teaching. Conversely, neglecting the importance of changing teaching strategies in a scientific way would hold back the countries in their improvement.
