

Nowadays we are producing more and more rubbish.

Why do you think this is happening?

What can governments do to help reduce the amount of rubbish produced?

The problem of damaging the environment has sparked a heated debate among people. There are numerous different causes as to this difficulty. This essay will elaborate on this contentious issue and suggest that some possible solutions should be done by the government to tackle it.

First and foremost, broadcasting new products' advertisements ubiquitously, viewers are encouraged to buy an array of items not useful for them. In other words, they have become materialistic and this situation leads to them producing huge amounts of garbage. For example, couples who just got married and started a new family tend to buy different appliances regardless of their needs. Further and even more importantly is associated with the given that technological devices has increased the pace of production and the mass manufactured instruments could be another important responsible for creating the great amount of waste.

Considering feasible ways of dealing with mentioned difficulty, only when authorities allocate enormous sums of budgets to producing disposable packaging, can they grow successful in facing the problem of continuously damaging the environment. In addition, not only can they levy extra taxes on plastic material such as bags for carrying shopping to home, but they also are capable of raising people's awareness in regard to deleterious effects of garbage in living place. For instance, they can ask teachers to teach children how they can avoid purchasing unnecessary products.

By way of conclusion, the most prominent reason is that individuals have become consumerism and tend to buy different devices, and managinging it needs the partnership between members of the public and the government.
