

In the past, shopping was a routine domestic task. Many people nowadays regard it as a hobby.

To what extent do you think this is a positive trend?

These days, people tend to shop in great malls in every free time and it is very desirable for them as leisure activities unlike the past ~~that~~ when people had another opinion about shopping, they consider shopping ~~as~~ an important task. In this essay, ~~we-I~~ will discuss the pros and cons of ~~this~~ these changes but I personally, ~~I~~ believe that it is a positive development.

In the past, there were a few stores in every city maybe they were located in the city center, and there were not in every region of the city and also there was limited access for them so people had an opinion that shopping is not an easy task and they only bought consumer products or food and groceries. On the other hand, today, there are many huge shopping centers or malls in every region of the city and also transportation systems are advanced so the ways of access are easier than before. Therefore, people's mind is changed by these facilities so they include shopping as a pleasant activity.

This development has a lot of advantages the same as gathering ing members of family or friends together in a comfortable environment, a variety of goods and attractions such as s cafés, cinema, food court give get them the wide range of options to choose so they can have a great time in there. But ~~in-on the~~ there other hand, the disadvantages of these development ~~are~~ consist of some items, same as; advertisers try to deceive people to buy something unnecessary for them or as not as good quality in the advertisement or a group of friends s can

~~spent~~ spend their time in some sport clubs or swimming for hanging out with each other instead of going to shopping malls, ~~that~~ which is better for their health.

In conclusion, I personally, believe that shopping is one way for happiness so I think the advantages of this development are more than their disadvantages.
