

The government should allocate more funding to teaching sciences rather than other subjects in order for a country to develop and progress.

To what extent do you agree?

It is said that teaching sciences is received more preferences over other subjects in allocating budgets by authorities in order to developing and improving a country. I strongly believe that advancing in sciences not only it leads to a country development but also it can save much money than the allocated budgets by passing time.

Science plays significant roll in the growth and prosperity of a country. in order to enhancing this growth, governments should assign a more portion of funds for teaching and developing sciences. To exemplify, fossil sources are gradually diminish due to the increasing in usages, which is why scientists are looking for renewable energy sources such as solar, marine, biogas energy and etc. For capturing these kinds of energy, a country's experts have dedicated much effort and money on their studies. They have been modifying capturing approaches in order to increase the efficiency; therefore, it has costed enormous money for experiments, sets of equipment and guiding PhD students to reach this goal, and they will be continuing because the energy is a crucial matter. There are many other examples showing that our primarily needs including health and agriculture are relying on the improvement of sciences.

Another important aspect of allocating more funding in teaching science rather than teaching other disciplines, is that sciences can prevent spending more money on vital problems in the future. If a country discover and predict the problems, they can reduce or omit the detrimental consequences which are costing lots of money. As a result, supporting sciences with adequate funding causes saving lots of fortune. For instance, finding a treatment for infectious diseases or inventing their vaccines not only ~~does-it~~ prevents disease from spreading ~~the-disease~~ but it also save a lots of money.

To put in a nutshell, sciences are the key to success for developing a community; thus ,teaching and supporting them with sufficient amount of funding must be much considered by countries tend to be prosperous. It does not mean that other disciplines such as art, humanity and history should be ignored, they are essential for a country developing as well and they usually cost less funding to develop.
