To improve the quality of education, universities should spend more money on salaries for universities' professors. Agree or disagree?

When I was younger, I would definitely have said that paying more money to university professors would improve the quality of education. However, no longer do I think that way. I reckon that improving the education quality depends on many factors and not just the professors.

First of all, although spending more money on professor's salary can increase their satisfaction of their job and make them more eager (eagerer) to spend more energy on teaching students, it is just a part of this cycle and I think it is considered a team work. Another critical part of this cycle is played by the students. Actually, they play a key role on this case by being a hard worker in their projects and exams and their efforts improve the education quality. For instance, in my university, professors' salary is not as high as that of my friend's professors' ~~salary~~ in another university and by far, my university students are more successful in their exams and future career.

Second of all, to my mind it is way better to spend more money on educating professors and make them familiar with new ~~technics~~ techniques, than spending money on their salary in order ~~for to~~ improving/improve the education quality. As the saying goes "work smarter not harder" and new learning methods and modern technologies permit us to study and work smarter. By teaching technics to university professors we increase their students' learning. For example, one of my university professors used new learning methods to teach her students and much to our surprise, her students did way better in their exams in comparison with other students who took their classes with well-paid professors who used old-fashioned methods.

In conclusion, from my point of view, paying more salary to professors can be helpful in improving the education quality but not as helpful as paying attention to students and their studying and learning methods.
