

Some people think that all university students should study whatever they like. Others believe that they should only be allowed to study subjects that will be useful in the future such as those related to science and technology.

Discuss both these views and give your opinion.

Some people say that if you decide to study in university or college , you have to choose the field which you as a student like . Because if you don't like your major then you won't like your future job , so you will ~~be~~ not be interesteded to continue your career . But ~~on the other opinion~~by contrast, some people say that you should choose a field which ~~have~~

promises a good future and it will make a good job career in your life. ~~In from~~ my point of view, interests and future are two keys for being successful.

On the one hand, being interested in the major that you study is the key to the happiness in your future life . for example, if you hate civil engineering , you shouldn't choose that just for ~~it's its~~ benefits and I think if you are a happy chemical engineer with low benefits , then it's better to be a sad civil engineer with high ones s . Because if ~~you love~~ you love your major , this will present a good career for you and there is a good reason for that and it is , If you are an eager student then you will study more and more to improve your knowledge .

But on the other hand, some people say if your field won't bring you a good/proper/decent job in the future, Not only will it not make a good money for you but also this is not a perfect field.

In conclusion, although ~~make~~ making a good money out of your major is good/desirable, you should be very interested in your field ~~in~~.

In my opinion, if you choose a field that ~~inclusive~~ includes a complex of those points of view will make a major perfect.
