

As people rely more and more on applying technology to solve problems, the ability of human to think for themselves will surely deteriorate.

Discuss the extent to which you agree or disagree with the statement and explain the reasoning for the position you take.

It is not recondite that dependency on technology had several ~~downsides~~ ~~drawbacks~~ in human lives. Nowadays people tend to spend more time on various applications on their smartphones rather than spending time for communication or reading books. Even their commuting time will be filled with technology.

The statement intends to elaborate on status of development of human brain from various perspectives which technology might have impacted not in a positive way. The statement declares that applying technology more and more made humans ~~to be~~ more dependent on it and have them not ~~to~~ develop their brain skills such as problem solving, thinking for innovative ideas.

However, technology had its merits apart from making humans addicted to it. Technology could bring about rigorously sophisticated tools in order to find well-founded evidence to prove the theories. As an instance, scientists delineate various theories regarding spaces, various planets, and stars. Although these theories were based on scientific evidences, they could not be proven via true evidences. However, technology could make it happen through highly fine telescopes and cameras, which could take high-quality pictures of stars or planets. One of the recent examples refers to findings regarding black holes in the space, which ~~has had~~ been an outlandish unresolved issue for decades. Now by the assist of software technology, scientists could convert the captured pictures to data and depict the reality of black wholes.

On the other hand, it cannot be overlooked that in some cases development of technology ~~has led to humans not only not to use exploit-~~ ~~the human their~~ brain ~~sufficiently not only to use their brain less~~ but also utilize it in order to solve the more involved issues that needs hours of analysis. Technology to some extent has improved some time-consuming and mundane calculations via calculators or counting software. To exemplify, in corporate businesses with the huge rate of sales and currencies transactions calculation of revenue, loss and profits can be a cumbersome without counting and advanced financial software. Also, some fundamental software such as excel provides the necessary tool

~~forte~~ experts to apply their understanding of numbers and convert them to some visual data to make them more readable for even novice employees.

Technology can impact human experience in various areas from space to learning methodology in a positive ways. However, if ~~it—~~ technology can deteriorate aggravate the quality of human life either in his thinking skills or self-efficacy ~~which—it~~ might need~~ed~~ to be more scrutinized and ameliorated.
