

Man is destroying earth. Describe three ways we can stop this.

It widely acceptable humanity has remarkable effect on the environment. Today, people are over ~~use-~~using natural resources and we are also polluting the environment and we are also going toward consumerism. In fact, people are causing the problem but people are also suffering from the ~~problem~~it. Here I want to take some ~~measurements-measures~~ how to tackle ~~with~~ this worrying trend.

The most important policy in order to deal with it is preventing deforestation that stems from staggering numberss/amount of over logging and overgrazing that leads to global warming and some other disasters like flood happening and ruining the natural ~~habitat~~inhabitant. Ergo, we are supposedd to take some solutions to replenish the resources. For instance, in this cutting-edge era we can use E-books instead of producing a leaf or number of books. It not only ~~does it~~ diminishes the consumption of resources but also it helps preventing from extinction of planet ~~specious~~species.

Likewise, in my ~~opine~~opinion another problem is partly causedd by pubic transportations like motor cycle, air plane, ~~تک سرنشین~~single passenger vehicles that ~~deteriorate~~degrade the ecology and lead to demolishing of the OZON layer and it needs substantial improvements by the government. For example, were I in charge, I would encourage individuals to ride a bicycle. Obviously, not only ~~dose~~does it keep them healthy but also prevents polluting the air.

Also, another positive feature could be the improving system of recycling by ~~utilize~~utilizing this method we can reduce the amount ~~number~~ of waste as well as prevent spreading greenhouse gasses that are released from rubbish. Not only ~~dose~~does it requires much less energy but also it helps to preserve natural resources. For example, we must reduce consumption of disposable tableware and use reusable bags for shopping and avoid using single-use plastic bags.

To sum up, conservation of natural resources is a huge and pressing issue to compound the problem. We must take it serious otherwise the ~~worse~~worst is yet to come and our next generation will face ~~with~~ shortagess.
