Using a computer every day can have more negative than positive effects on children. Do you agree or disagree?
Give reasons for your answer and include any relevant examples from your own knowledge or experience.

These days the computers are an essential part of our life. ~~It is~~they are useful for every member of the family in day to day life. In many countries children often use ~~computers~~ them from a very young age. In my opinion, such children ~~who use the computer~~ daily are actually developing critical skills for their future~~s~~.

~~For~~ from a personal point of view, computers are an invaluable resource to help children and young people explore the world around them. For instance, children who use the internet to satisfy their curiosity about various topics are already becoming independent learners.

On the other hand, the negative~~s~~ of using too much computer cannot be denied. Many children are likely to be addicted ~~to computers~~, to video games in particular. Spending too much time on computer games, children will lose their interest in studying as well as communicating with their peers. Young children who play games more than 7-8 hours or do unproductive tasks in a computer are actually bringing more negative points ~~that~~ than learning to use the miracle machines. But think about a child who learns programming, play~~s~~ games, learn~~s~~ advanced computing 3-4 hours a day; she would become a great computer professional someday.

In conclusion, if the young people are spending their time for entertainment purposes in front of a ~~computer~~screen, then ~~he/she~~they had better be utilized ~~in~~ somewhere else. Parents should either supervise their children while using computers, the internet and encourage them to use ~~it~~ them for benefits or ~~do~~ not allow their children to waste their time ~~with~~ on computers.
