Every country has poor people and every country has different ways of dealing with the poor. What are some of the reasons for world poverty ? What can we do to help the poor ?

—————-

According to the statistics, nowadays, the world is suffering less from poverty then before. However, these statistics have their ups and downs. Unfortunately, aside <u>of</u> all the positive information and graphs, the human race is still facing this issue. Decades ago, poverty was due to the monstrous growth in population, Mostly in large countries like India or China. Centuries ago, history <u>has</u> taught us that powerful politicians, the rich and royal families were the cause of poverty by being greedy or by colonizing a country.

This all being said, present day poverty is still not only from population, but also still, the poor is being ripped off by the powerful. A ~~countries~~ country's wealth always depends severely on ~~it's~~ its political status and geographical position. For instance a ~~bipolar~~ polarized extremist society is most likely to suffer from economic ~~crisis~~crises.

However, as said before, we are globally making progress in fighting poverty by creating ~~a~~ charity NGOsof them. And some wealthy generous people are making moves for countries in need of help. The issue with poverty can be fixed if humans care about each other and a society has to have flexible political views to make the correct choice and ~~instate~~ promote justice.
