

Do you agree or disagree with the following statement? Parents today are more involved in their children's education than were parents in the past.

The ~~cooperation-participation~~ of parents ~~with-in~~ children's assignment ~~have-has~~ increased, ~~in-~~ compared ~~d~~ with the past generation. Because the families for past ~~decayed-decades~~ were not much too aware about ~~the~~ education and did not have free time to help their children. I will support this statement by referring to some points.

To begin with, in the past decades parents did not care that much ~~to-about~~ their children's literacy, they strongly believed that their ~~descendent-descendants should-had to~~ pursue their career in order to expand and improve it. But nowadays the beliefs have been changed during the last years. Nowadays studying is more valuable for families in ~~compare-comparison~~ with past decades. Since the competition between students got increased, parents are more ~~impetus-motivated/eager~~ to involve in their children's assignments. Also parents of ~~the~~ new generation are more awareness of the world around them. They intend to extend their child's knowledge, abilities, skills, and because of that they are more eager to enroll children ~~to-in~~ various types of classes, which could amplify the children's abilities. Since the demand for entering ~~to~~ the university have enhanced, most of the ~~family-families~~ are more concerned about the education level of their children in society.

Secondly, the didactic systems ~~is growing~~ more complex than were ~~in the~~ past decades. The number of the books the students should read ~~has-about them~~ dramatically increased. Also, the methods of training ~~has~~ become more complex along with the lessons ~~increased~~. On the other hand, students should spend more time ~~on-theat~~ school, because the number of classes they should take have ~~raised-risen~~ during the current years. Consequently the cooperation of parents ~~has~~ increased ~~d~~ to improve their learning ability and help them to ~~resolving-resolve~~ some hard-to-solve questions which may confused the children. For instance my ~~daughter-sister~~-in-law get stuck in resolving most of ~~the~~ mathematical issues, and her mother who is an engineering ~~have-has~~ enough literacy to assists her, in order to make some points comprehensible for her, ~~in-as a~~ result, she is able to get ~~the~~ best scores in the class and exclude other competitor ~~s~~ in case of mathematical questions.

In conclusion, since more changes have been brought up in the way of life, and education ~~has~~ become more sophisticated, parents' involvement is required ~~d~~ for making lessons easy for their children.
