

Over the last century the pace of development in terms of agriculture facilities which has impacted the way producing more food, has increased. There are a matter of serious concerns around that some people are still suffer from shortage or lack of food in some districts of the world.

On the one hand, the most compelling reason for this phenomenon is that governments have been faced with over population and the far more speed of giving birth whole the world. Although there has been advancements in agriculture industry, there is not enough food sources since the world is struggling with some environmental problems. This problematic issue includes deforestation, depletion of natural resources, water contamination, soil degradation, etc which are cause shortages in preparing food. It is noticeable that there is no adequate attention beyond this issue. Not only do authorities pursuit their benefits, but also tend to exploit developing countries to gain more power. Due to this fact, people are not able to earn money, and it will cause an inevitable problem that they cannot afford buying healthy food. More over, governments aggravate the more difficult situation.

There are, however, some workable solutions to help starving individuals cope with this phenomenon. The governments should implemented some related law to preserve natural grounds which count as the cornerstone of agriculture to produce more food. Although there are specific root causes behind this environmental concern, effective policies can be adopted to remedy the situation. Some stricter laws, being care of waste disposal, designing proper landfills and avoiding pumping chemical waste into rivers are some effective ways towards this issue. Governments should take steps to reduce the range of unemployment which helps people to be able to meet their needs and have access to food. More over, allocating more money to consider individuals in this issue can be efficient.

To sum up, there are many people whole the world prone to starving. Authorities can reduce the severity of it considerably by putting a wide range of efforts in terms of financial supports and implementing stricter laws to plummet the effects of extroverted factors on natural resources.
