Do you agree or disagree with the following statement? In today's world, it is more important to work quickly and risk making mistakes than to work slowly and make sure that everything is correct. Use specific reasons and examples to support your answer.

It is no doubt that nowadays with the modernization of people's lives, the mechanization of everything and because most of the time people struggle with technology they should try to work quickly in order to not fall behind in using it. Most job opportunities are for people who work quickly but do we~~you~~ want something done right or get it delivered quickly?

First of all, if you want done some projects quickly, the probability of making mistakes would be increased because your accuracy would be diminished, so you have to take the time to correct your mistakes. You cannot do your job both fast and correct at the same time. For instance, I do everything quickly without precision and this is in my blood. Every time my mom says ~~you~~ I must vacuum home, I finish it fast but a lot of trash stays on the floor, so I must sweep again. On the other hand, some people believe that a person who is faster may make some mistakes but they can learn from them and do better next time but due to the fact that there are some jobs that only one small mistake can put many lives in danger, so working quickly is not beneficial. For example, flight~~s~~ safety checks. ~~Occurring~~ every little mistake occurring on a flight can threaten the crews and passengers' lives.

Secondly, when you do something quickly, ~~the~~ stress is released in your body ~~subconsciously~~ unconsciously which is ~~so~~ extremely harmful and you can transfer it to others. For instance, according to conducted research when a pregnant women does something quickly, she stresses out and this stress will transfer to her baby, so it can be dangerous for them.

In conclusion, from my perspective compared with working quickly and risk taking, working slowly but ensuring correctness is still more important because you do your work in peace and there is ~~no~~ little need to check it again.
