There are social, medical and technical problems associated with the use of mobile phones. What forms do these problems take? Do you agree that the problems outweigh the benefits of mobile phones?

Today mobile phones have become one of the inseparable electronic devices connected to a vast majority of individuals across the globe. Though attractive, this novel gift leads to a lot of serious problems ranging from community, health and technical points of view. When it comes to this ~~controversial~~ notion, I hold that despite the mentioned drawbacks, the merits of this modern solution far outweigh its negative points.

Perhaps most of us have the terrible experience of being offended by someone talking loudly on his phone on a means of public transportation such as ~~a~~ **the** tube or **the** bus or maybe felt embarrassed owing to an untimely phone call in the middle of an official meeting. These are clearly unacceptable social behaviors leading to societal plights if members of society do not manage ~~it~~ **this** appropriately.

It has been ~~warned~~ **pointed out** by many a medical expert that the radiation of both mobile stations and handsets can have an adverse impact on humans' cells. There is a large body of research indicating those who live near mobile stations**, or otherwise known as BTS,** are vulnerable to infertility which in most cases lasted for a long period of time or in rare ones it persisted lifelong.

The other major issue with mobile phones which dangerously threat**ens** the users is the technical issues which in many cases can cause life-threatening injuries. Battery explosions are a case in point which have already killed or disabled a handful of mobile users in many parts ~~or~~ **of** the world.

To cut a long story short, I ~~would like~~**tend** to subscribe to the view that in spite of the pressing problems this invaluable device has **created**~~provided~~ for us, we have no choice but to make the most of it. Arguably we can adjust our social behavior, reduce the health damages, and find out the root causes of technical problems to make mobile phones tamed.
