

These days our behaviour ~~are-is~~ going to destroy the Earth. People's reckless lifestyle ~~have-has~~ been ~~making-causing~~ a huge ~~amount-number~~ of environmental problems such as losing particular species of plants and animals. This is one of the calamities That is disarranging the cycle of life. People believe that this problem is the most important one, but ~~it's~~ absolutely not. We are living in a polluted and destroyed planet with far more issues for instance ~~Global-global~~ warming or even plastic ~~wastes~~.

Co2 and some ~~another~~ kinds of chemicals keep the Sun's heat inside the Earth's atmosphere and do not let it go out so the Earth will be ~~increasingly warmer/warmer~~ and warmer. We can see the effects ~~that-where the~~ glaciers of Arctic and Antarctic have been melting for years. so polar animals or it is better to say wildlife are endangered.

Most people are leaving their plastic ~~wastes~~ all over ~~the~~ nature. They even ~~don't~~ divide trash in their houses. also some governments do not spend money and energy for reproducing plastics. Some of them even ~~don't~~ know that ~~it's~~ less expensive than ~~produce-producing~~ new plastics. these ~~types of wastes~~ have polluted the environment and sometimes animals feed themselves with them and they will ~~be~~ die.

We are living ~~at an age/in an era wherein ages that~~ plastics, which ~~they~~ are a part of our lives, ~~is-are producing-produced~~ every single day. also for transporting ~~things-goods/cargo~~ faster we need to use fossil fuels ~~that-which~~ obviously leads us to a lot of environmental problems. In this situation, we should learn and research more about these things and educate ourselves to prevent the Earth's issues. ~~The~~ Government can ~~build-introduce/make~~ some laws and handle this crisis more ~~excellentefficiently~~.
