

In the recent decades, many environmental problems have increased as the result of human activities and wrong management which have direct effect on the ecosystem. But, why should we really take care of the environment.

Environmental problems have escalated alarmingly as repercussions for human activities and poor level of managing in previous decades. But, why people are supposed to show prudence on this issue is discussed below.

First of all, the earth is the only place where people can live. There is no other planet with oxygen and water that are the most crucial needs for staying alive **respectively**. According to the latest research, published by NASA, neither oxygen nor hydrogen has been **founded-found** in three nearest planets such as Mars. This amazing planet is our home. It gives us everything such as: air to breathe, food to consume and shelter to stay safe. It takes care of us, so we had better take care of it in return. Deforestation, toxic waste, marine pollution, water pollution are created by human's activity. Therefore, **those** whom suffered **most** from the side effects **is-are** humans **themselvesitself**. [Sabaitc.com](http://Sabaitc.com) کارگاههای آموزشی Whether we believe in karma or not, if something had been done to protect

the ecosystem there would not have been such a karmic situation.

Secondly, biodiversity is an essential need that must be considered. We need animals, plants and minerals till the last day of our lives, the same as next generations. For instance, deforestation abounds as a result of modern life. ~~It there~~ should not be dramatic rises in natural resources consumption for our short-term needs. These natural resources are needed and will ~~have been~~ needed till humans are living on the earth. Without animals we have nothing to eat, without plants, no shelter can be built and also no oxygen can ~~be~~ exist to breathe. Biodiversity plays a vital rule-role in continuing of human being existence on the earth. People, animals, plants and all of the creatures existential are ~~depending~~-dependent and ~~connecting~~-connected to each other like a chain.

To conclude, the importance of taking care of the environment must be considered as a crucial fact which would be better to be taken more seriously by everyone. It is not just about us, it is about how long human beings will be ~~existed~~-existing on the earth in the future.
