

More and more wild animals are on the verge of extinction and others are on the endangered list. What are the reasons for this? What can be done to solve this problem?

Every country has animal species that are limited to unique areas. Some of them become extinct and some of them during the years is destroyed. How it can be solved and what ~~are~~ the causes are, will/ are going to be discussed in the following paragraphs.

~~The~~ research shows that hunting is one of the reasons and the main reason that results in ~~the limited~~ limiting the animal population. Hunters s may be human or perhaps be other wild animals. Some of them believe that another reason is the weather. Climate change is one reason that ~~leads to~~makes the destruction of animals. For years, global warming has had some consequences that ~~narrow~~ animal loss is one of them. It leads to food required to ~~become~~becoming eliminated. On the other hand in the life cycle, some of the animals feed on other animals. It leads to a race of them ~~become~~becoming limited in numbers.

From ~~researcher's~~researchers' point of view, if it is an environment ~~that where~~ animals are ~~protection~~protected, the races remain. In this protected area, they can pasture and get nourished from sources that humans provide for them. They can reproduce in a safe area and their children are protected from other animals. If the heavy government ~~heavy~~ fines are imposed on~~for~~ a hunter it will demotivate hunting~~becomes reduce that they fallow hunt~~.

In overview~~summary~~, animals can be be limited in numbers during years due to~~in~~ factors such as hunting causes of hunt and climate. Animal extinction~~it~~ can be reduced by protecting them in the area that the government assigns for them.
