When teachers assign projects on which students must work together, the students learn much more effectively than when they are asked to work alone on projects

Nowadays, because of the crucial role of education in childrens—'s life, the educational systems are looking for the more effective methods allowing the students to learn more efficiently. One of the important issues revolving around in this regard/educational methods is whether teamwork is more efficacious compared to working alone. I myself incline toward the former and see some advantages in group working at schools.

First of all, every single person possesses a perspective which may be completely different from those of others. When a student endeavors to perform a project on her own, she would work out the problem from her own perspective. Nevertheless, one affair can be solved in a variety of ways and there is not always one particular solution for an issue. As a result, being as a membership in a group lets the student to see the other possible explanations, which leads to analyze analyzing every angles of a matter and ultimately escalate escalating her understanding. On the other hand, now that the potential abilities of every student is distinct of others, their performance is boosted when they work as a team. Some students are superior in analyzing the problem, however; the other ones can effectively put the results together and arrive at a conclusion. Hence, Not only can they efficiently present their own abilities, but also they can learn from those of their friends.

Secondly, there are some advantages in favor of working as a team, which can indirectly increase the students' learning. It is a given that you are under more stress when you work on a project lonely/alone/single-handedly and your stress will be more if you come across some difficulties or obstacles. As numerous psychological studies statessuggest, high levels of stress -cortisol hormone-negatively influence the learning process. You should finish your project as efficaciously as you can, but you are challenging deal with some problems, which are beyond your ability. You get worry worried about your performance and your note. On the other sidehand, the high levels of stress do not let you to concentrate on your work effectively. Due to the low concentration, your performance will diminish more and you will be stick-stuck in a vicious cycle.

In conclusion, most of the educational studies assert that the teamwork is much more effective than working alone. Besides the aforementioned educational benefits, I see some social advantages, so that the students indirectly learn how to communicate with each other, how to discuss and finally how to accept other opinions.
