

One of the consequences of improved medical care is that people are living longer and life expectancy is increasing.

Do you think the advantages of development outweigh the disadvantages?

Nowadays, ~~by~~with improvements in the medical area, life expectancy ~~has increases~~increased dramatically. The average living among developed countries has experienced increases from 40 years to 70 years in the last century. Along with the various benefits of medical improvement, the side effects of these days' treatments cannot be ignored.

Disease diagnosis plays a crucial role in treatment methods. The inventions of devices such as MRI and sonogram machines or performing clinical examinations which detect the probable diseases help doctors to cure their patients. Moreover, discovering some diseases such as cancers or heart problems in the first place can ~~be~~resulted in indefinite treatment and prevent the loss of individuals.

The invention of the vaccine is another precious achievement of scientists in the medical area which prevents lots of illnesses and pandemics that not only can lead to the death of individuals, but also ~~avoids~~control/stop/deter/manage some diseases' side effects which cause disabilities and disorders in people specifically children. We can totally understand the importance of vaccine due to the spread of coronavirus in the world that has completely ~~disturbs~~disturbed people's life and healthiness and also has imposesimposed the huge pressure on governments and humans' ~~economice~~economy.

Despite the uncountable advantages of improvement in discovering and curing diseases, the side effects of these developments are deniable. From the devices, MRI for instance, to treatments can cause a different and occasionally irrecoverable effect on individuals' bodies. For example, using X-rays to a large extent can ~~be~~resulted in getting cancer or using too much medicine for a long period can cause new disease.

To sum up, in my opinion despite the drawbacks of new remedies to cure people and patients, the benefits of this development, which lead to an increase in life expectancy, outperform the disadvantages.
