

Some people believe that it is good to share as much information as possible in scientific research, business and the academic world. Others believe that some info is too important or too valuable to be shared freely.

Discuss both views and give your own opinion.

Needless to say, the world is increasingly globalized and technology has penetrated into all aspects of our life, which means we can easily have access to a diverse **range** of information in different areas whenever we want or **where ever** we are. The convenient access has brought some difficulties as some ~~people have~~ pointed out but from my perspective this perfect opportunity which helps us to be up to date ~~updated shouldn't should not~~ be neglected.

A group of people are concerned about free access of information in different fields. As a matter of fact, people tend to use information on the internet freely and they do not know the value of resources which are behind those valuable **pieces** of data. They are many **scientists** working on ~~varies-various~~ fields in order to prove their worthwhile approach. The ways they pass and the competences they have, illustrate how glorious ~~is~~ the product of their research is which we use without paying any cost. Therefore, the time and the cost, they afford demonstrate they deserve to be encouraged by being paid for those priceless **piece** of information that they have prepared for us.

On the other hand, another group of people tend to use information without any payment. Thanks to technology, there are a wide ~~various-variety~~ of devices through **which** we can have access to all different **fields** of studies, conveniently. People can enhance the level of their knowledge, even if they are not wealthy. What is more, middle-class or poor people in societies who ~~cannot-not~~ afford to take or pass different courses in academic fields, ~~a loads~~ of free information provided by experts are the greatest precious gift for them. Also, **scientists** and other professional people who achieve some information with hard **working**, they want to improve the level of knowledge in societies. So **it is** their long term ~~ambitious-ambition~~ **which** ~~cannot be compared with cost not even with~~ all the wealth in the world.

All in all, even though, some people tend to label everything even science and knowledge, with money, I believe that the value of knowledge is far beyond materialistic gratification. Thus we must make every effort so that everyone enjoys the fruits of scientific and economic latest discoveries.
