

Scientists believe that the world is in danger due to environmental changes. Some people say that personal lifestyle changes should be made to reduce the damage to environment, while others think that the government should do something to help. Discuss both views and give your own opinion

The ~~nature of the~~ environment is changing/has been changed; accordingly, the world faces danger constantly. The question is whether all the steps to reduce this potential danger should be ~~done~~ adopted/taken by governments or individuals play a significant role as well.

In most societies, ~~the~~ lack of public awareness about irrecoverable environmental effects on the next generations of humanity results in allocating less budget ~~on to~~ proper education in the area of the environment. In fact, should governments raise environmental awareness, possible consequences of people's actions could be reduced substantially. According to recent surveys in nations where the ecological syllabus is inserted compulsory to train fresh minds, ~~a the~~ range of environmental degradation has been reduced significantly. Furthermore, governments could impose legislation on anti-environment actions which means s that heavy penalties could be considered in order to protect the environment. For instance, under new ecological regulations, new constructions are ~~used~~ using environmentally friendly materials in their foundations having the minimum damage. The High tax (which is) put on oil is another tangible example.

The modification of lifestyle, on the other hand, can ~~allocate~~ play a significant part ~~of in~~ reducing this damage. These days, the way people live is affected by the media; ~~encouraging~~ them to follow the latest fashion. As a result, they are more materialistic and ~~consumerism~~ consumerist compared to/in comparison to/as against/as opposed to the previous generations. This trend calls for more ~~utilize~~ utilizing of the limited natural resources. The futuristic view of this means that essential actions should be done, otherwise the world will face difficulties in providing necessities. Moreover, people could be encouraged to not only use reusable tools but also recycle their trash.

In conclusion, although the role of governments to tackle this problem is inevitable due to its power in increasing public awareness and imposing laws, all of the efforts are incomplete without people's contribution. I believe that all individuals and authorities should have close ~~participation~~ cooperation/collaboration together.
