

Some people think that the increasing use of computers and mobile phones in communication has negative effects on young **people's reading and writing** skills. To what extent do you agree or disagree?

Some individuals are of the opinion that incremental use of technology in communication with others by cell phones and computers has a minus impact on people's ability either reading or writing. I partially agree that owing to overuse of the said devices, which have lessened their skills in these two sections by way of customary methodologies,

On the one hand, today's people are entirely dependent on cutting-edge technology in terms of communication and businesses, and so forth. They have lesser reliance on classical reading and writing systems. That is to say, paper books, envelopes, and everything pertained to stationary, indicating their aptitude in those skills have gotten rusty due to not having exposure to paper or some such. As a matter of fact, their necessity has been diluted, Thereafter technology age manifested itself from 2000 onwards.

On the other hand, people's reading and writing requirements have been obviating by E-books sources, coupled with texting by computers' or handsets' keyboards since technology age. These trends have fallen pervasive in this day and age, and there is no room for traditional methods. In practice, one could lay their hand on any books via social media. What's more, any connections have become more convenient and quicker, which the drawbacks of giving and taking envelopes whether by hold-up or break-down vanished.

To outline, albeit the people's command on reading and writing has been reduced, better yet, most of the individuals senses no need to read by paper or to write by stationery, by virtue of steep upswing in technological devices.
