

**Some people believe that preserving the natural environment is crucial, however, most make no effort to do so. Why do you think this is happening? What are some simple actions that could help the environment?**

Over recent years, a considerable number of people have supported the idea that natural resources should be protected from potential threats, yet most people do not apply effort to achieve this goal. Understanding the main reasons behind this negligent attitude could contribute to adopting appropriate measures to prevent the environment from deteriorating.

Lack of public awareness is probably the foremost cause why a broad range of individuals seems unconscious of the environmental matters. To put it simply, not only do natural tendencies prefer to play down abstract problems, but also, they tend to speculate that they will happen in the distant future. Due to the fact that people have not faced the consequences of their actions, they have no clear minds about this vital issue. To illustrate, urban people often leave their trash in streams or canals blocking or limiting the water flow; and devastating floods are due to their ignorance.

There are some fundamental resolutions that must be carried out to improve social knowledge. International campaigns in all forms of communication to train people about how indispensable the natural resources are and even calls for tough environmental regulations should be passed to maintain the planet **for posterity**. In addition, the press and social media could play a significant role in expanding knowledge about potentially natural hazards; persuading people to participate in campaigns. Another solution is that people could take waste apart thoughtfully, based on biodegradable, non-biodegradable. When individuals' actions are coordinating coordinated with governments, it could result in the desired results.

In conclusion, inadequate wisdom in the field of the environment could be regarded as the main reason why people ignore their behavior. The much sought-after result will happen as long as people and governments contribute closely in different ways.
