

In many countries these days, the number of people continuing their education after school has ~~increases~~increased, and the range of courses available at universities and colleges has also increased.

**Do you think this is a positive or negative development?**

In my opinion nowadays education has opened a new lifestyle ~~in~~for people around the world. By the rapid and fast improvement in technology and its uses in people's lives, a more educated population must have a positive impact on a country. From the point of view of the people themselves, ~~by counting~~continuing their education after school in their favorite major, is also a blessing/great thing. People now study in ~~the a~~ vast majority-range of fields and each major has its own specialists. There are more specialized courses on offer that qualify people for specialized jobs rather than subjects that they had to do because there was ~~a~~ less choice.

~~In~~on the other hand, these different branches of a field brings a bit of complication for understanding simple things easily. This complication makes people dependent ~~to~~on specialists and in my opinion, somehow this is not helpful/so good, because life is not ~~as that~~ simple as it used to be the way it ~~supposed to look life before~~. In addition, understanding ~~some the~~ needs for studying such majors ~~it for~~ is a bit hard ~~and its look like silly~~. For instance, I have heard of people doing degrees in subjects like pop music, which ~~it~~ is hard to see how useful such courses, and qualifications are, and it could look like a waste of time.

In general, I think that **the increase** in people continuing their education after school **and the increases** in the range of courses available to them ~~is~~are both a positive and negative development.
