

Education children is a more difficult task today than it was in the past because they spend so much time on cell phone, online games, and social networking web site. Agree or disagree?

Without a doubt, the education system has changed throughout history which nowadays ~~it~~ involves technology. In my opinion, devices and online games have some positive effect on children's education. I feel this way for some main reasons which I will explore in the following essay.

First of all, cell phones have made educating much easier. In other words, access to information is much more efficient by using them, so children can achieve various materials without attending ~~at~~ a class. The best example is, when schools were closed due to COVID-19, children should have online classes which ~~was-were~~ impossible without smartphones. They used some applications such as Skype, Adobe connect and Skyroom. Although children spend a lot of time on social ~~networking networks~~, it does not mean that makes educating difficult. My personal experience is a compelling example of this fact. Two years ago I decided to learn English professionally to prepare for TOEFL IBT test. By searching the internet I found a wide range of testing methods to answer reading questions besides taking notes for listening. Moreover, I watched YouTube to deepen my understating of each topic which was extremely beneficial.

Therefore, it goes without saying that, phones and social web sites pave the way for children to .../provide productive condition for children to learn easily.

Secondly, online games can make children more creative by raising their imagination. In simple terms, online games by giving freedom to children allow them to create anything they imagine which can be practical for their future life. For instance, the Dungeons and dragons is one of the best imaginary games which allow each player to create their own character to play instead of a military formation. As a result, boosting creativity can be effective ~~on-in~~ education by

discovering something that children never noticed before, solving their problems or figuring out new ways to look up at diverse e issues differently. Besides, social networking web sites act as an incentive to learn for children. For example, Clubhouse provides a friendly environment for children to discuss different subjects and interests and also make a contribution to increase their sociability. Hence, as is clear, social media make education effective ly.

Last but not least, some people believe that cell phones waste children's time, so they have negative effect on their education. However, I strongly believe otherwise maintaining that this way of thinking is nothing but a tunnel-vision which ignores the importance of the abovementioned facts and parents by controlling children can control preserve the related side effects.

To recap, on the basis of the reasons mentioned above, I totally believe that neither cell phones and online games nor social networking web sites s makede educating difficult. In fact they are beneficial in a wide range of ways based on enhancing creativity and motivation and providing comfort able situation for better learning.
