

## Should government spend money exploring outer space ?

It is undeniable that whether the government should spend money exploring outer space or not is a hot topic, not only by people in my country but also by ~~people many~~ across the world. In other words, as far as in modern society people are more and more inclined ~~d~~ to discover the unknowns, people in less developed countries ~~iesy do not don't~~ have any tendency to discover ~~a~~ new world since they are suffering from many primitive shortages. In my opinion, spending too much money exploring outer space is unnecessary somehow and I will explore my primary reasons here.

The first problem with this argument is that some parameters like equity or integrity should be considered in ~~the~~ society's development and progress. As an illustration, Russia is a country developing and exploring new discoveries and also helping other ones achieve these developments, while in this modern country there are cities which aren't even equipped with ~~the~~ internet. ~~What I mean is that simply put~~ as far as people in this country, Russia, aren't educated enough and also equipped with the facilities to consider the use of traveling outer space, all of the achievement for exploration is somehow failure.

Secondly, I think digging in ~~a the~~ new planet is ~~relatively kind of~~ meaningless since there are many minerals in the earth which haven't ~~been~~ drawn out yet and we should know that extracting the materials cost a lot. Moreover, we still have many opportunities to make our own planet a better place to live in comparison with spending too much time and money ~~to~~ discovering ~~the~~ outer space.

In conclusion, in spending money ~~to~~ exploring ~~inge~~ outer space many criteria should be considered and in the century ~~in~~ which we live the humankind achievement ~~on in~~ the earth hasn't reached this point of saturation ~~where which~~ no unknown exists ~~on in~~ the earth. And once he accomplished his mission ~~on in~~ this planet then exploring ~~the~~ outer space is a must. Who knows, maybe there are planets which living ~~on in~~ them can make human beings' ~~s~~ life easier and also more interesting.
