

Some people agree that historic buildings should be preserved in their original forms others argue that this is both inadvisable and impossible discuss both these views and give your own opinion

Changes which have ~~been~~ occurred in recent decades, are an inevitable fact and cannot be either denied or stopped. To put it simply, all aspects of life are changing during ~~the~~ time which ~~that~~ is not exceptional for construction field.

Some believe that the old buildings should ~~be~~ remained with their previous fundamental designs because of their sense of nostalgia ~~nostalgic~~ and historical values. They emphasized ~~d~~ that if authorities do not change the buildings and just try to repair some destroyed sections, not only will the new generation get familiar with history of cities and countries, but also tradition might be saved and appreciated. If all historic buildings and monuments are destroyed, any history trace of cities which definitely ~~ately~~ is root of their culture may not ~~be~~ remained and it is clear that nobody is allowed to ruin culture and tradition ~~completely~~.

On the other hand, some others who are interested in modernism maintain that in this rapidly changing world, changes happen ~~would happened~~ in all aspects of life, so it ~~is~~ seems ~~ed~~ that it is likely to be impossible to obstruct modification in architecture and civil areas.

modern life needs modern cities and buildings and it is unimaginable to use new technology in old buildings. Besides, new inventions and recent changes are making our life more comfortable. consequently, living in the past is not rationale. According to their beliefs, we should proceed in all aspects and take steps with time. Therefore, preserving old buildings is meaningless and waste of money.

To sum up, some individuals assert that old and historic buildings ~~required~~ to be preserved in terms of their initial design and shape, while others prefer modern buildings for all cities and agree that we should try going forward along with development of ing technology. I truly believe that governments should try to repair some special historic buildings to save culture and tradition for future generations s. Meanwhile, we should try to use technology in construction to facilitate life for all citizens.
