

Many museums charge for admission while others are free.

Do you think the advantages of charging people for admission to museums outweigh the disadvantages?

In this day and age, new technology and modern life occupy the whole aspect of people's life. Obviously, in this circumstance a large number of people ~~are do~~ not keen on ~~to-following~~ history and increasing their information and knowledge about it, so some solutions can fill the gap between people who live now and the past generation. One of the effective ways is eliminating tickets of visiting museums and some historical monuments.

Although museums and cultural places need ~~to-preserv~~atione and cost, an increase increasing in people's level of information ~~of them among people~~ is more important. In my opinion, museums can play a key role in ~~to~~ transmitting some valuable concepts that developed they unified by the past generations ~~face~~. Moreover, the more the information about traditional and religion enrich, the more sense of patriotism and national identity promote. In addition, not only do they become familiar with ~~to~~ their own culture, but also they can achieve some information about an other countries which were in a relationship with their country in the past.

Furthermore, is-in this way, we can attract more tourists who can directly and indirectly affect ~~effect on~~ economic ~~economy~~ development especially in some countries with ~~which are~~ economic ~~crises~~ ~~crisis or have some financial issues~~. No sooner does es the number of tourists increase than a variety of occupations ~~occupies~~ will be created. In fact they can meet indirectly a massive of facilities for host countries.

I pen down saying, sometimes the government should lose some subtle benefits in exchange for at- ~~the expense of~~ achieving other excessive privileges. Besides correlation among people and enlightened future generations could be a valuable ~~valuble~~ reason for doing following ~~administrate-~~ the this worthy path.
