

~~By-with~~ population acceleration, ~~the~~ demand for transportation may grow up. After some decades, we may be ~~observeding~~ a reduction of car users. ~~In-from~~ my standpoint, were I to choose between options of agreement or disagreement, I believe in reduction of car usage.

20 years later, public transportation will definitely improve in manifold aspects, such as ~~technologiyical~~, ~~constructional~~ and ~~the environmental~~. Thus, all countries ~~will~~.... afford to establish more public transportation in all cities. It may ~~cause render~~ countries to even lessen the ~~ticket's~~ prices since compensating overuse ~~over usage~~ of private cars may cost countries more. Therefore, everyone ~~will~~.... afford to ~~transport~~ easily due to the cheap price of tickets, so most of people prefer to use public transportation. People may not feel any need for private transport.

Regardless of advantages of utilizing cars, there are some undeniable disadvantages that in some cases, ~~it~~ may not be compensable, such as air pollution, ~~getting stuck~~ in traffic jams and energy consuming. Gradually, by population growth, people will confront even more mortal issues, Hence car consumption ~~will drop~~. People themselves experience these harmful consequences, so they try to reduce the car use to minimum. On the other hand, countries may culturalize to drive cars just in emergency cases. So that, people learn how to employ a car in daily life in order to decline the harm to lowest level.

Recently, science development has ~~been~~ improved considerably. Therefore, in near future, ~~the world universe~~ will certainly be surprised by new devices inventions in ~~the~~ transportation industry. Today, global warming and oil shortage have worried ~~/alarmed~~ countries. Accordingly, scientists and researchers have been searching for novel ways to benefit reproducible energies and reduce energy consumption in order to prevent the consequences. ~~Since, hence,~~ the more cars ~~useconsumption~~, the hotter ~~the~~ earth will be. Thus, they will make these devices and provide them for all countries.

In a nutshell, I am optimistic about the world state of future transportation and I believe that car use will considerably decrease ~~throughin the~~ following years. All countries reach an agreement changing the transportation ~~lifestyle/life style~~ of people in order to prevent likely mortal disasters like global warming, energy consumption and air pollution.
