

P213. If you could travel back in time to meet a famous person from history, what person would you like to meet?

Professor Hesabi: 1- outstanding character because of his moral 2- because of his morale encounter difficulties 3- physic the student of Einstein and theory of relativity

One of the most aged ambitions of the human has been traveling back in time and do~~ing~~ what they should have done ~~must have been do~~ or meet someone who they could have met ~~been meet~~ in the past. ~~Numerous~~ an arrays of scientists, artists and writers lived before we got born and most of us recall them with respect and ~~severe~~ much passion. I myself have been long inged to ~~for~~ meeting Professor Hesabi, since I was a teenager, and I would have chosen to become familiar with him, if I had had the/a chance ~~plausibility~~ to travel during the time.

First and foremost, I maintain that any person who has tremendous morale, deserves acclaim. Professor Hesabi was impressively courageous and often sacrificed himself for his family and compatriots. As an example, after he graduatedes from electronic engineering, he emigrated from his hometown to southern provinces of Iran. Living in the harsh weather of those that regions, people were deprived of any primitive amenity (utilities) such as electricity, air conditioninger and even enough sanitary utilities. Not only was Professor Hesabi one of the prime advocates of provision of electricity, also he himself was one of the ingenious experts working in that region.

Secondly, He was an exemplary person encountering different hurdles. He was born in a poor family and his father did not afford his education expenses. Therefore, he was compelled to work and study simultaneously. Furthermore, he immigrated to Germany and underwent numerous difficulties monetarily and spiritually. He was an outstanding Einstein's student and excelled in learning the theory of relativity. Thereby, he was the first physicist introducing and employing this productive theory in his fatherland. All of those mentioned points render me ambitious to meet and communicate with him.

And last but not least, I have not had a convenient opportunity to learn the Einstein's theory yet. I always think that if I was born some three decades ago, I could have been his student and maybe a successful expert in physics. I would like to stress that Professor Hesabi was an excellent teacher in Tehran University.

To put in it a nutshell, if I had had an opportunity to travel back in time, I would have inclined to meet Professor Hesabi. The main reason of this choice ~~chese~~ is his morale and good moral and knowledge.
