

Some people think government should spend as much money as possible exploring outer space .other people disagree and think government should spend this money for our basic need

I know that we should spend money for our basic needs on earth, but I think exploring outer space can help us to solve our problem on earth and it has a lot of benefit for us and generations after us. Maybe, it is able to help solve our basic needs such as the need for fuel perhaps on the others planets exist minerals or organic materials s exist, it causes to protects the earth from internal and external threats, and finally it leads to invention.

According to the research, scientists have discovered many useful minerals on in the other's planets. We know that one day all minerals and organic materials will be finished on the earth, so we will be faced with with shortage / deficiency that we can use others planets natural resources and bring that to the earth.

Today many developed countriesy are investing (financing) in on the space and they send satellites to space such as communication and telecommunication or weather satellite by these technology we can predict the lunar eclipse , weather , the possibility of hitting of meteorites or the sun solar storms and the influence of these on the earth and we are preparing to deal with these problem.

I think outer space leads to new inventions. Scientists survey how we can live in on the space without gravity what happens to our body, especially for our muscles or the effect of the sunrays on our skin in outer space. In other subjects/fields scientists are making new material for example different kinds of plastic or alloys. as a result, new research leads to many useful inventions that help us e to live more comfortable and longer .

On the other hand, investigation on the outer space have downsides bad-side because today many countries, outside the earth's atmosphere are looking for military purposes and ownership of the planet. Unfortunately, the many citizenry of the space station leave their garbage in to the space and they do irreparable damage to the outer the space.
