

In the past, when students did a university degree, they tended to study in their own country.

Nowadays, they have more opportunity to study abroad.

What are the advantages and disadvantages of this development?

You should use your own ideas, knowledge and experience and support your arguments with examples and relevant evidence.

In this day and age, as people have benefited ~~from~~ with using the world-wide-web and improved passenger transferring methods, new horizons have been opened for students who reached ~~to~~ the degree of completing their educations in universities.

Some say they must continue their studies in other countries than their own country because this will help them to know other cultures and it gives them self-confidence. Besides, they can import knowledge to their country and use up-dated science to improve their homeland's industries and infrastructures. Furthermore, this will develop a bridge between two countries for interacting and opens new doors to communicating with other religions or cultures.

Opponents of studying abroad claim that there is not any guaranty that these talented student/fresh brains will come back to their fatherland and investment in ~~on~~ their nurturing will **evaporate**. Consequently, after years that this rate of immigration frequently happens, educated people's proportion in the country will decrease and homeland will experience/taste the bitter taste of regression**retarding**. Therefore, it is necessary to prevent students from going abroad for continuing their studies on foreign college or universities.

From my point of view, as I have seen ~~saw~~-in the last past twenty years that a vast number of students who went to other countries for continuing their educations never came back and considering that you cannot imprison highly educated people inside your country and control their associations~~come and go~~, I believe there should be encouragements for these people to go and complete their studies and grab and bring the knowledge back to their country.

In a nutshell, continuing educations in other countries which are pioneers of science would be a great idea if there where motivation incitation for educated people for coming back and serving their own countries.
