

## How we can reduce garbage production?

Nowadays, one of the main threats ~~ening factor~~ is producing garbage more and more such that by increasing population, it plays a vital role ~~in for~~ threatening world nations~~s~~, so it would be effective~~,~~ if we provided~~d~~ solutions as soon as possible.

Throughout ~~In through of~~ history, experts have introduced some beneficial solutions for this problem such as separating goods , using garbage sales~~s~~ , making compost and recycling the products.

Although many containers have been determined for dividing glass, plastic, papers, hazardous and chemical substances in our cities , the bulk of them is seldom absorbed~~ed~~ in the soil. Experts advise~~see to~~ buying renewable products~~,~~ for instance paper grocery bag , or paper food boxes~~es~~ instead of plastic bags~~s~~ or glass bottles and jars. Pesticides, batteries, cleaners and lights are very dangerous and their toxins ~~toxic~~ must not enter ~~to~~ the environment because it will pollute water and land obviously.

Artists have suggested a new way to reduce~~ing~~ garbage by designing handworks. First they will rinse and color the staffs~~,~~ and then will build~~t~~ new products such as pots ~~Pots~~, frames~~s~~ and pencil ~~Pencil~~ cases~~s~~. People dispose of magazines, devices, clothes or Furniture. Not only should they not throw them away~~,~~ but rather also donate them to charity centers or garbage sales.

Also edible materials can create perfect compost~~,~~ so we should dig a hole and put them under the ground until they have been disintegrated gradually. Many much garbage ~~is are~~ burnt in landfills~~s~~, but this way always is not always useful. Not only do they cause ~~become~~ pollution, but also chemicals~~s~~ and toxins~~se~~ enter ~~to~~ the environment

to sum up~~,~~ the public can prepare huge landfills in countries~~,~~ but recycling will save/rescue ~~survive~~ our world for future easily.
