

When a country develop its technology, the traditional skills and ways of life die out.it is pointless to try and keep them alive.

To what extent do you agree or disagree with this opinion?

Nowadays, ~~with some say that~~ technological advances and their rapid and wide applications have a significant impact ~~on in~~ conventional skills and a lifestyle, while ~~others some individuals disagree oppose~~ that technology and tradition are indeed compatible.

First of all, traditional methods can be ~~the~~ best solution for the problems ~~that~~ happened in a ((mainstream)) life style. Throughout innumerable cases in history, people ~~have been are~~ trying to preserve traditional skills for using them in technology for example, people in small cities near Africa have a few facilities ~~such as and~~ schools and it is hard for a family to send their children abroad or other schools out of ~~the~~ city, here new technology and ~~the~~ internet can solve their problem and pupils are ~~able enable~~ to use classes online and there is no need for high expenditure and transportation.

Second, in fact traditional method ~~generate innovate~~ new ideas for technologies and a modern lifestyle. The word "love" ~~((love)) is~~ knitted in a sweater in a traditional way with the hand of women in south of Africa, but business managers buy new devices for producing textile and making new lines with ~~feeding applying~~ this world into computers and copy them into textile. Not only does it help to boost production, but also investment, ~~and~~ in a short time they could receive ~~much numerous~~ money.

To put it in a ~~nutshell not shell~~, we must see ~~that~~ technology and tradition ~~side-by-side they~~ can live ~~side by side inside each other~~ comfortably and ~~complement cover each other themselves~~.in fact, we must use tradition because it innovates ideas for technology. tradition is part of our culture and all humans try to preserve ~~it them~~ for using it to develop technology.
