

Many people like to wear fashionable clothes.

Why do you think this is the case?

Is this a good thing or a bad thing?

Nowadays tendency of putting on more fashion clothing has an increasing trend and more people are trying to wear products of well-known brands of costume designers/producers and spend a lot on their outfits.

There were always rich people which-who they have enough money to buy costumes of famous brands at of any price and this is just like a habit for them, whereas the majority of people are suffering from financial problems, and some of them are trying to be following/keeping up with on the flow of fashion and sacrificing other aspects of their lives on their clothing/attire coverings. Although many say good names in the garment cloth industry always use the best materials for producing their merchandise, many others believe that consumers can buy goods of the same quality and longevity at on lower prices which those are not of famous names.

From another point of view, the public's prejudice is based on people's outfits and proponents of pursuing the fashion insist on the tremendous effect of the first look on any meeting, especially on job occasions. Therefore, it is compulsory for everyone to fulfil the norms of the society and try to look better and more fitted and if this best fitting has have been mixed with especial brands there, we will have an impressive conquering mixture for most situations.

I, personally, believe that using the fascinating brand-new and fashionable outfits is not only not an undesired habit, but rather also a pleasant behavior which every one everyone, whether the user or the spectator, will prefer to have meet. Whereas this tendency must not shape a mandatory rule of the daily life-style of ordinary people who which they have more serious expenditure such as medical expenses which they may not be able to cannot afford.

In conclusion, although proceeding daily mode is not an improper manner especially for urban citizens, people must watch over and strike a balance in on their lives and abandon some of their unnecessary outgoes.
