

Nowadays most big cities have high congestion and road traffic issues. What are the real causes for this? Suggest a solution that will help to relieve it.

Overpopulation and one of its direct consequences, traffic congestion is one of the major difficulties people are dealing with it in large cities every day. Although there are several proven solutions to this controversial issue, traffic jam remained unsolved for decades in many parts of the world. This essay will elaborate root causes of this knotty problem in along with some practiced method to mitigate the heavy congestion on main roads.

As a result of industrial revolution in Europe, mass production of commodities, personal cars included, is of the main factors of heavy traffic on motorways in many parts of the world. Car factories started to produce more, to provide more jobs, wealth and welfare and to be more accurate they were successful in their main targets by did not aware of by-product of their outputs. In most parts of globe financial facilities by banks, car factories and leasing companies are easily available for most people who do not afford to buy a car in cash, and this is the main reason of single-driven cars in the streets and highways during rush hours.

During the last decades, not only a lot of researches has been done by university professors or freelancers to downsize the heavy traffic on main streets but also the governments are working and dedicating some amounts of budget on this issue and as a result some practical ways to have pronounced. Expansion of public transportation besides legislation of no drive zones is another method with which governments could control traffic in many metropolitan areas. Carpooling is an environmentally friendly way that reduce the significantly the volume of cars on streets as well as air pollution nowadays in practiced in many cities worldwide.

To make a long story short, I must say that while I think that congestion on motorways and roads is something unavoidable, I maintain the idea that with simple solutions provided in this essay, if we cannot get rid of it completely, we can control it.
