

some parents buy their children a large number of toys to play with.

what are the advantages and disadvantages for the child of having a large number of toys.

with the rising trend of affluent middle class in the world, it is prevailing common among families to buy their children a large number of toys to play with. There are many supports and drawbacks for this action some of which we-I want to explain some of them in this text.

each toy has its own benefit and effect that can develop a cerebral system in different aspects, for example LEGO blocks can improve creativity. they can build what they imagine in their mind with Legos. another example could be ~~car with~~ remote controlled toys which can help them to learn how a car is drivens. Chess can help them to design strategy and focus. some toys are designed to teach children investment lessons like Monopoly, they learn about investment and return of it.

nevertheless, Not only could buying every toy ~~or plaything~~ the children want could spoil them, but also could decrease the value of toys for them. they may switch from one toy to another , some toys ~~has~~ have no value and ~~is-are~~ just waste of money and time for them.

our kids are as empty as an unwritten hard disk , we can write anything on them. ~~in-on~~ on one hand, parents should choose proper toys for their children, ~~these toys~~ which can teach them life lessons and prepare them in their childhood for real problems. on the other hand, they should be aware that some of them are just waste of time for their kids and can have negative effects on them.
