

Some people think that all university students should study whatever they like. Others believe that they should only be allowed to study subjects that will be useful in the future, such as those related to science and technology.

Discuss both these views and give your own opinion.

It is believed that pupils ought to choose a major which is more practical and also more required in their country, while others think vice versa. In my opinion, each student must study whatever they are interested in in order to get appropriate advantages which is profitable for themselves as well as their society.

On one hand, many, most importantly families, believe that students should consider the job market before choosing their major in university. In fact, if they consider this market, they could guarantee their future job. In other words, due to parental care of students' future, they force them to choose a major which has high demand in the related/respective country. However by this method the government is able to cover human resource's needs as well as the country's need in any field such as science and technology. But, it is undeniable that students who study based on covering needs are less successful than pupils /those who attempt to study what they really interested in.

On the other hand, there are students who are persistent in choosing a specific major which they like the most, in a recent human resource research, scientists have had some interviews with graduates and they found out those who study in a favorite/interested subject are more content with their life and most importantly satisfied with their job. It should be considered with experts that this satisfaction leads the whole society to achievement. Achievement which is adequate for a healthy society in both mentally and physical areas.

In conclusion, there are two views about choosing a major in university. One side believes it should be done by considering the job market and the other believes it ought to be selected out of students' interest. I think, selecting by considering students' quality and interests is much more sufficient for both the country and students.
