

Problems with environmental pollution have become so serious that many countries are trying to solve these problems.

Suggest possible solutions and give your own opinion.

In recent decades ~~the~~ environmental pollution has posed a threat to human beings. These contaminations include air pollution, natural pollution, noise pollutions, ~~and so on~~. To experts, urban lifestyle and consumer culture are ~~the~~ main ~~mainly~~ critical problems nowadays. They believe that solving these problems with ~~the~~ help ~~of from~~ people and attention of authorities would be attainable.

First and foremost, ~~the~~ environmental pollution is directly related to our lifestyle. For instance, many people prefer to use their private cars instead of public transport due to many reasons such as having comfort, saving time, clarity and much more besides. Moreover, some individuals have several cars without any concern about air pollution. It seems that, for solving this problem, authorities should introduce ~~hard-and-fast~~ rules for decreasing air pollution. For example, levying tax on cars' owners and taking initiative regarding traffic schemas in some places of town, renewing and modernizing public transport systems in ~~whole~~ most places in cities with reasonable price could be effective.

The Second solution could be decreasing our consumer culture. The modern life has brought many negative habits for humans. For instance, we prefer buying new products and throwing old goods away instead of repairing them. Also the packages of new products, which are non-biodegradable, damage ~~to~~ the environment. I opine that, we could recycle and reuse products .

In conclusion, we could change our lifestyle, so that buying new goods happens just when we need them in order to avoid natural resources ~~to~~ running out. I would argue that we could help each other to have ~~for having~~ a better world without pollution.
