

## More and more people prefer to read e-books than paper books. What are the reasons for this? What problems can this cause for them?

E-book was a great idea that came into scientists' mind when they saw ~~the-its~~ possibilities ~~of it was-were~~ provided ~~by-with~~ the aid of technology. In this way, everyone could reach any book they wished in any time. Nowadays, this technology is growing and I would like to explain some of its expanding reasons.

The first reason could be the accessibility of e-books. Some Books are sometimes hard to find or you should traverse an annoyingly long amount of distance for buying them. However, you can find any books online and read them without moving from your house.

Not only ~~is-are~~ e-books more accessible, but also ~~it-they are~~ easier to carry and maintain. Keeping a thousand books in your house is quite impossible, while you can save as ~~much-many~~ books as you require in your devices and retrieve them immediately. Besides, if you start to read a thousand-page book, you could never carry it wherever you go, because it is ~~so-extremely~~ heavy and bulky. But with e-books, we can carry any book with whatever volume it has and face no problem.

Although e-book has many advantages, too much using it/~~overuse~~ can risk our health. Our ability of sight could be affected by LCD of devices which we use for reading e-books and our neck bones get under pressure while using it, so we should control the amount of time we are using e-book.

In conclusion, e-book is a technology that is assisting us in obtaining every book we need in any time we want and is helping us to get rid of books' maintenance problems. But using e-book can harm our health, hence we should manage employing it so it would be harmless/~~less harmful~~ for us.
