

Some people think that all university students should study whatever they like. Others believe that they should only be allowed to study subjects that will be useful in the future, such as those related to science and technology.

Discuss both views and give your opinion.

Opinions diverge greatly on what subjects students should study in the future. While some people argue that it is better for students to be forced into certain key subject areas, others believe that they should have liberty to choose every field they like. Personally, I think individuals should be free in this issue.

On the one hand, I understand why some are of the opinion that students should be encouraged to study either science or technology. They may assert that such university courses are more likely to be beneficial than certain art degrees owing to more job opportunities they offer as well as career progression and higher salaries. That means the young learners ~~gained~~ gaining university qualifications in science areas, for example, are more likely to be financially stable, and therefore enjoying an improved quality of life. By the same token, as a result of the dominant role of technology in today's job market, most parents tend to show ~~propensity~~ a desire for ~~that~~ their offspring ~~to~~ being familiar with technological advances, being specialized in this area through tertiary education, which could ensure students' job prospects.

On the other hand, I would side with those who are advocates of freedom in choosing ~~a~~ a university major. From my point of view, if people were impelled to follow the subject that they are ~~disun~~ disuninterested in, not only would they not be successful, but also they would fail to continue/pursue their courses, falling behind their peers. Moreover, society and job market urge the necessity of competent/ qualified individuals in a variety of fields as all human beings' needs including accommodation, entertainment and education should be equally met. Then we require as ~~many~~ many ~~much~~ much architects, artists and teachers as we need engineers and doctors.

In conclusion, I would argue that although it seems that studying ~~at~~ at some subjects mentioned above ~~are~~ are ~~is~~ is more financially rewarding, the people should be ~~free~~ free ~~liberate~~ liberate to choose every subject they are willing to, because every person is born with different talents and tastes.
