

When a country develops its technology, the traditional skills and ways of the life die out. It is pointless to try and keep them alive.

To what extent do you agree or disagree with this opinion?

When a new major innovation is announced, many eager people start talking about how it can change both their lives and the world, whereas there are some people with different perspectives that are worried about the negative effects of the new technology on their culture and traditions.

Although technological progress is an inseparable part of today's world, some traditions can be affected by the new incoming changes. Some people believe that this cultural invasion comes to eliminate their national identity. Indeed, they hold this opinion that by progression some ways of life and traditional skills get unfamiliar and they can be forgotten, thus several careers become obsolete, so many people can lose their jobs.

While, many users of technologies argue that not only can innovations facilitate people's lives, but also with the invention of the camera and disk storage, customs can be preserved by keeping them alive. (it can preserve customs by keeping them alive, for example, with the invention of camera and disk storage). Furthermore, modern equipments provides possibility of easier excavationing for archaeologists to explore new civilizations or new aspects of a culture. And also, some of them have been impressed by our ancestral background or they have been developed to find out the answers of to many questions about the several historical mysteries to benefit from using them in people's lifestyles.

Finally, in reality, during their era, many of today's traditional skills were considered new changes and they could have been resisted by people. Moreover, in the process of advancement, some customs which are in opposition to developments and they don't have a deep root in history and people's lifestyles can be sacrificed, This it is the way of evolution.
