

Some people want the government to spend money on researching life on other planets. Others, however, think it is a waste of public funds and there are too many problems on our planet to be fixed first. Discuss both views and give your own opinion.

In today's world, a certain percentage of individuals are of this opinion that more and more budgets should be spent on other planets exploration. However, a considerable number of issues ought to be addressed in the globe prior to any researching on other strange planets. In this essay, I will attempt to elaborate on both standpoints together with expressing my stances on this argument.

On the one hand, it is obvious that researching ~~on~~ the Milky Way ~~of galaxy~~ and strange planets enjoys its favorable merits. Firstly, it **paves the way for** scientists to find a proper place for human beings to live in years to come due to the fact that there ~~are-is~~ not enough space on the earth regarding the population explosion. Besides, this process not only ~~does~~ broadens the space experts' horizons about their surroundings, but also can teach them vitally important information to improve their experience and skills in order to enhance the standard of living.

On the other hand, searching ~~on~~ other planets has imposed astronomical expenses on the government which contributes to numerous problems for them to manage their financial issues in their country. Furthermore, a wide range of plights such as educational, as well as social problems ~~that~~ should be tackled first on the earth. Needless to say that more and more people are residing in poor countries who have ~~no-~~ limited access to health centers, schools and other prerequisites of their lives. Therefore, resolving these complexities seems to be more crucial than other procedures, even space exploration.

Personally, were I to comment on this essaytopic, I would vote for tackling people's ~~s-~~ predicaments on the earth, although researching ~~in~~ the space involves numerous plus points that should be taken into account.

To conclude, governments can draw up an effective plan to perform both solving individuals' problems and exploring ~~on~~ the other planets, albeit it could be ~~so~~ extremely cumbersome to control their expenses ~~on-in~~ this method.
