

**Nowadays the most important task is the environmental protection of our planet for future generations. To what extent do you agree or disagree with this statement?**

These days, people from all walks of life are talking about the recent climate change around the globe. While academicians are trying to find feasible solutions to protect the environment, many business-oriented approachesed to life are drastically destroying what we have to deliver to our children. When it comes to this notion, I hold the idea that although protecting the environment is extremely important, there paying attention to other factors should not be ignored.

First and perhaps the most important reason about saving our old mother nature is, we do not have any other place to live, and if we do not pay enough attention to saving it, we will definitely encounter life-threatening issues in near future. Not only have we contaminated soil, but also we have polluted many water resources, in addition to polluting the air and let alone air pollution in metropolitan cities. I believe saving the environment plays a crucially important role in humans' life, hence its leading role in future generations.

Not surprisingly, I opine that many other priceless responsibilities are incumbent upon us besides taking care of the environment for posterity. Education can be considered a fundamental factor guaranteeing a better life. It is needless to say that an uneducated generation can ruin our planet with the current technology we are delivering to them. Another key factor I claim should be taken into consideration is space explorations. That we are consuming our minerals in a way that they will run out one day is an undeniable fact.

So overall, while I agree with the saving the climate for the posterity, I am of the idea that youth training and space science should be considered more seriously. Enjoying the perfect weather, our the next generations who are supposed to enjoy a healthy environment can ruin it if we do not enlighten them with different aspects of life.
