

**In** Many places, new homes are needed, but the only space available for building them is in the countryside. Some people believe it is more important to protect the countryside and not build new homes there. What is your opinion about this?

These days due to rapid growth of population, there are not enough places for people to live in there while the urban area is full of occupied homes. Besides, city centers could not take new buildings anymore so the only available place to construct new houses would be countryside. A certain group of people believe that what is actually important in not making new place of residence in rural districts is preserving nature.

Some people rightly claim that although new homes are needed, it is more essential to protect the countryside as massive construction could harm nature. it is true that since the machines which do operations in there produce hazardous items such as pollutions and noises while these pollutants will ruin nature. Moreover, trees should be cut down and habitats of animals should be destroyed to provide proper lands for making new buildings. Therefore, making new buildings requires vanishing the nature. As an example, it should be said that in some cities of Iran, near 30 percent of nature resources are ruined due to this trend.

It should be argued that it is the government that should hold the responsibility of providing new places to live while protecting the countryside. For instance, authorities can buy dilapidated houses and build new skyscrapers as they hold more people in it. Furthermore, governments can manage the population of a city and give them funding to live in other cities which have empty houses or are less crowded therefore there is no need to build new homes in certain cities.

Considering all the facts above, it is rational to conclude that it is more important to protect the countryside than making new homes as the disadvantage of this phenomenon to these area is irrecoverable while value of nature is priceless thus governments should provide effective solutions.
