

This issue ~~have~~has been one of the most important controversial subjects among societies and majority of citizens are not eager to spend extra money ~~to~~on the governments but the second group who are advocates ~~about of~~ this responsibility have the opposite idea.

People who are employees and have to work around 8 hours through out a day tend to save and spend the whole salary for themselves instead of paying part of it to taxes and government allocate it to some activity that does not have any impact on their life such as spending ~~to on~~ other poor countries which suffer from lack of food or investing ~~on in~~ space research.

Another reason that citizens are pessimistic ~~to about~~ spending taxes is those people who run away from rules and would find tricky ways to avoiding paying. ~~At~~ last but not least, citizens believed that the destination of the amount of money is unclear and they ~~can not~~cannot trust ~~to~~ this system.

On the other side ~~hand~~, some people completely support this idea and believed that there is a direct relation between paying taxes and developing countries. Firstly the gap among levels of society is lifted out and integrity makes sense, as far as paying tax has been increasing with high salary jobs. Secondly this amount of money could tackle the problems in order to caring care and supporting impooverished families and avoiding much more matter such as addiction and divorce.

Finally, constructing and developing cities without tax is unattainable, for instance, building hospitals, schools and universities are consequences of governments money. Besides that preparing somewhere special areas for leisure time in public areas such as parks, cinemas and theatres ~~have has a~~ direct relation with spending taxes.

In conclusion, I ~~am~~ highly advocate ~~to~~ spending taxes, because developed countries ~~does do~~ not have extra choices to manage their land and we have to cherish this rule ~~the above-mentioned measures~~ to make create a better future.
