

Countries are becoming more and more similar because people are able to buy the same products anywhere in the world and world become industry.  
Do you think this a positive or negative development?

By developing sciences and technologies, similarities between countries are increasing rapidly and due to exports and imports people can purchase the same goods throughout the world easily, so this phenomenon has changed the world as a global village. In this essay I am going to consider its ~~either~~ both advantages ~~or~~ and disadvantages.

~~In~~ from my point of view, the advantages of this phenomenon are much more than the disadvantages. by accessing ~~to~~ technologies, the speed of the growth of growing industries will rise at a rapid rate, therefore it will provide people's welfare and also trades between countries will grow speedily and for buying new products or learning modern technologies, people will not need to travel to the other countries. Furthermore, from the perspective of medical science, occasionally, some patients who suffer from an acute illness do not have enough time to move in other countries or even cities, it is necessary to cure them in their hometown, hence the benefits of having access to the same products and becoming ~~industry~~ industrial.

on the other hand, by industrializing the world, people's work time will increase gradually, as a result, spare time will become a luxury they cannot afford then. Moreover, due to hard working, people will not have enough time to spend with their family or for themselves, therefore people will become more and more depressed insofar as the real meaning of happiness is changed. For example, by just sending an email or message or calling ~~together~~ each other, they will be excited. Worst of all, by mechanizing lives, the trend of getting marriage will decline and people prefer to live with their own robot produced in a special way of their requests.

In conclusion, living in such a complex and developed world, is immensely ~~various~~ with variety as well as hard as if it is completely unknown and strange for us.
