

In the past, when students did a university degree, they tended to study in their own country. Nowadays, they have more opportunity to study abroad. What are the advantages and disadvantages of this development?

Nowadays, According to educational tendency the number of universities is increasing around the world. The difference of universities is in their ranking, public university or ~~privet~~-private university. These varieties create more opportunities to study all around the world for students.

The most important advantage of studying this development is that if there are more choices with different features, making decision would be ~~more~~-much easier, many new majors ~~are~~-have been created in these recent years ~~that it~~ which leads to everyone ~~to~~-being persuaded to continue their education and even they ~~should~~-might have to go abroad, moreover, studying in foreign countries is the chance for students to learn a new language and new culture. Furthermore, they would gain more experiences when they live without their families with new responsibilities.

On the other hand studying abroad has some drawbacks, one of them is the high tuition fees of the some ~~university~~universities, when students study in their own country, they have better support from their family, so they can concentrate on their study without worrying about the cost of living. In addition, when students leave their home countries to study, they have to adapt to a completely new environment ~~which~~-where they would ~~they~~ face culture shock.

To sum up, In my opinion, although studying abroad is a chance for every students, the economic situation of the family should be the first priority to consider. I think the advantages of studying abroad far outweigh the disadvantages.
